

ceram

CASE STUDY

Headquartered in Staffordshire, Ceram is a global expert in materials development; analysis and consultancy, providing customised solutions that can help measurably improve performance and profitability through safer, regulatory-compliant and better-engineered products and processes.

Setting new standards in materials testing, their experts work as extensions of clients' teams, applying their expertise and capabilities to a wide range of sectors, including:

- aerospace & defence
- automotive & transport
- construction
- energy & environment
- healthcare
- minerals
- refractories

Ceram employs a team of research and product development professionals who are involved in physical and chemical materials testing, research, process engineering, product design and failure analysis. They are UKAS accredited testing laboratory and have further approved laboratories around the world.
